## Identification of the GEP project

Title	Let's discover secrets
Authorship	Patricia Tena Zaforas and Andrea Esteve Recatalà
School	Institut Ramon Casas i Carbó
Students' CEFR Level (A1, A2...)	A1
Grade	2nd ESO
Content area(s)	Maths, Geography, History, Science
Number of sessions (4, 6 or 9)	6 sessions
Teacher(s) involved	Patricia Tena Zaforas and Andrea Esteve Recatalà
Keywords	Cryptography, Key, Upper case, Lower case, Decode, Encode, Julius Caesar, Encryption, Vigenère cypher, Greatest Common Divisor (GCD), Analysis of frequency.

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

## 1. OUR PROJECT

**Introduction:**

Analysis of cryptography throughout the times.

**Driving question:**

How can you be a good spy?

**Final product:**

Poster's conference with mind maps (format chosen by students) that they decorate themselves hung in the high school corridors. The posters will have the shape of the UK countries and the mind-maps will be about the content about cryptography and English covered in the six sessions.

## 2. GOALS

## 2. HOW DO YOU KNOW STUDENTS ARE MAKING PROGRESS? (assessment criteria)

1. Encode and decode messages with main methods used throughout times.

1.1. Distinguish different encryption methods.

2. Define the evolution of cryptography from the military world in ancient times to daily life nowadays.

2.1. Create a mind map with the most relevant information about the evolution of cryptography covered in these sessions.

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

<p>3. Be able to identify the maths involved in messages encryption.</p>	<p>3.1 Include in the mind map the mathematical elements that cryptography involves.</p>

## 11. SESSION PLANNING

### SESSION 1: Activating session - Breakout

Objectives of the session: This session aims at approaching the notion of cryptography and encrypted messages. A brief insight is provided in this session by carrying out a breakout session. This session also has the following objectives: positive critical and creative thinking, cooperative learning, gamification, and learning based on challenges.

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

Content-obligatory language for the session:

- Academic language. Keywords: Encode, decode, plain text, key, lower case, upper case, below, cylinder, plus, less, times, over.
- Instructional text (e.g. the clues for this breakout are instructions for the students to follow for obtaining the code of the box).
- Explanatory text (e.g. the story that there is behind the game of the breakout).
- Academic language: discursive connectors (i.e. present in the explanatory text, the main story of the breakout, so, moreover, etc).
- Grammar items determined by the tasks and topic: Imperative (i.e. instructions, sum up, multiply, etc).
- Grammar items determined by the tasks and topic: Past tenses (e.g. narration of the story: stole, entered the house, robbed, etc).
- Interactive strategies: (e.g. Language support: Where is it? We got it!, etc).

Activities

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

1.1	<p><b><u>Activity 1 - Breakout:</u></b></p> <p>The aim of this breakout is introducing them to the concept of hiding messages, finding codes, and obtaining the key. These are the main objectives of cryptography. Therefore, this breakout is used as a metaphor for students to internalise the main objective of cryptography. Through this dynamic technique, students are hooked and in the mood of being good spies, which is the main idea of this project's driving question.</p> <p>The activity will be performed in the library where two groups will have to follow some clues. They are shown below:</p>	1h	R, S, L, I	T-S SG	Ge niall y	TA
-----	--	----	---------------	-----------	------------------	----

 **CLUE 1** 

**Let's discover secrets!**

In the third bookshelf coming from the door, on your right, there is a book about history.

It has a very important CLUE!

In the decoded text below, the letter B is A and the C is B.

game of maths is: HBNF PG NBUIT

**So,** TFWFO UJNFT TJY NJOVT GJWF UJNFT FJHIU FRVBMT

 **CLUE 2** 

**Let's discover secrets!**

You need to find a cylinder.

**OPEN YOUR EYES!**

aaaaaaaand calculate!

**CLUE 3** 

**Let's discover secrets!**

Search on the internet the name of the machine that nazis used to decode messages.

Remember that this is the one that Alan Turing got to decode messages with.

Sum up the letters of the machine and you'll get the number.

The result you will need to sum it up to the result of the following step.

**CLUE 4** 

**Let's discover secrets!**

1. Choose any number from 1 to 9.
2. Multiply it by 3.
3. Sum up 3.
4. Multiply it again by 3.
5. Sum up the numbers of the result.

Remember to sum up the number of clue 3 to this one. Then, sum up the digits.

They are the steps to follow to find out the key for opening the lock of the boxes. Each group has to solve four clues. The clues contain cryptography methods used to decode messages throughout times.

Students will need to discover who the robber of the pearl necklace is. This pearl necklace is part of the materials of the breakout. It is shown below:

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

The development of the breakout is explained deeply in the following section.

**FURTHER EXPLANATION OF THE BREAKOUT ACTIVITY**

The class is divided into two teams: A and B. There are two tables with a poster indicating which group this table belongs to. This title has the letter format with the “Game of Thrones” making reference to the “Game of Maths”, which is the subject this breakout takes place in.

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

There are two wooden boxes with a numbered lock with three digits. The guiding thread of the breakout is a robbery. Thus, by following all the clues, they can open the wooden boxes that will stay who the robber was and they will also find the collar of Elizabeth I of England.

In “**Clue 1**”, **TEAM A** has this coded message: **GJWF QMVT UXP FRVBMT**, which will correspond to the first number of the lock. The solution is: FIVE PLUS TWO EQUALS 7. Seven is the first number to unlock the box.

In “**Clue 1**”, **TEAM B** has this coded message: **UISFF QMVT OJOF FRVBMT**, which will correspond to the first number of the lock. The solution is: THREE PLUS NINE EQUALS, 12;  $1+2=3$ . Three is the first number to unlock the box.

In “**Clue 2**”, it is the case of the “Spartan scytale”, which you can see represented in the game in the following image. The image on the left is the official Spartan scytale and the image on the right represents the materials created by us making reference to the Spartan scytale. The idea of the Spartan scytale consists of rolling a tape on a cylinder and, by choosing the right one, they can read a hidden message. It also connects with the idea that Spartan Greeks used the inner part of their belts to hide messages.

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

There is more than one cylinder (spray, aluminium roll, cylindrical roll) to emphasise the idea that the diameter is very important to decode the message since if the students choose the wrong cylinder it is not possible to read the message in the tape.

The other objects that are cylindrical are distractors since not all the cylinders correspond to the tapes, making the reading of the tape impossible to read, and impossible to decode.

Group A can read the message in a wide diameter cylinder (the round box). Group B can read the message by rolling up the tape to the little diameter aluminium cylinder.

Group A has the following message: "Six times seven equals to". You must sum up the digits until there is only one. The solution is  $6 \times 7 = 42$ ;  $4 + 2 = 6$ ; 2nd digit of the lock: 6.

Group B has the following message: "Five times seven equals". They should sum up the digits, The solution is  $5 \times 7 = 35$ ;  $3 + 5 = 8$ ; The second digit of the lock is 8.

In **Clue 3**, it is the same one for the two groups. In this one, the students need to use the computer to find the name of the machine that the Nazis used in the II World War which Alan Turing achieved to crack the code with.

They need to sum up the letters and they will obtain one number. The solution is 6 because the name is "Enigma".

The number obtained will need to be sum up to the result in the following clue.

In **Clue 4**, students need to choose a number from 1 to 9, then multiply it by 3, and sum 3. Then, multiply it again by 3 and sum up the digits of the result. In this case, it will always be 9.

The solution is  $6+9=15$ ;  $1+5 = 6$ . Therefore, the third digit is 6.

The lock numbers are:

- For GROUP A: 7 6 6
- For GROUP B: 3 8 6

Moreover, this is the main story of the breakout. The story will be shown in the screen, So, this text will be read by each student. This is the **explanatory text** part of the COL:

A terrible event has happened! You could NEVER imagine what it is. A terrible crime was committed yesterday. Elizabeth I of England was robbed while she was out of her house. When she came back, she saw that her house was in a mess and her most precious barrel was EMPTY!! But, why was it the most precious one? What must she have in there? Wine? Money? Love letters?...

So, who committed the crime? It was unknown. The only clue is that the person was wearing a red jumper at the time of the robbery. The problem is that the people who saw the crime, the

witnesses, were the servants and were told to lie UNLESS they will be killed. So, it is not possible to know anything through their words. Fortunately, nobody was killed in the robbery. But, be careful! Something can change.

So, **TODAY, YOU** are **HERE** to solve this mysterious event. WHO ROBBED WHAT?

Elizabeth I of England called you, the police, to investigate what happened exactly. You go there and see some footprints in the garden. There was one near the wall. The thief must have fallen and entered from there. Mmmm...interesting!

You've got some envelopes on the table with some clues that might help you. They will give you the answer to open the final box. Follow the steps of those envelopes and you would know WHAT has been robbed and WHO committed the crime.

**DO NOT MISS ANY DETAILS! OPEN YOUR EYES! Be attentive!**

**Are you ready? 😎**

The group who finds out the keys for unlocking the boxes will get stickers as a present. The stickers are previously designed by the teachers taking into consideration the subject within which the breakout has been developed. At the back of the stickers, there is the name of the

robber. Thus, the stickers are employed as a metaphor of the prize obtained when a code is decoded and the spy gets a reward, normally, a message. In this case, the reward is the criminal, the person who committed the robbery. As the sessions are within the subject “Game of Maths”, making reference to “Game of Thrones”, the font of this famous series was downloaded so that everything is based on that particular topic. The stickers are these:

Template adapted from CLIL-SI 2015.

The teachers will be assessing using a checklist as a tool.

	Yes	No
Do they follow the rules easily?		
Do they speak in English when doing the activity?		
Do they realise that the words are hung on the walls?		
Have they solved the mathematical operations properly?		
Did they discover that the diameter is important for the clue?		
Do they realise that when they have a code of two ciphers they need to sum them up?		
Do they find a lot of interest in the activity?		
Do they find the correct code?		

Template adapted from CLIL-SI 2015.  
 More information at: <http://grupsderecerca.uab.cat/cliisi/>

Students will be exposed to the **driving question** in this moment of the project because they have carried out the breakout and they have a slight contact with spies. Therefore, they are presented with the question: **“How can you be a good spy”?** It is an appropriate driving question because students will explore the methods in which the cryptography has helped the hiding of messages, and, therefore, the task of “future spies” throughout times.

As we are covering a PBL project, it needs a **final product** which will be **a mind-map** covering all the details explained and worked on in class. This mind-map will also come **with the shape of the UK countries** since the UK is key in the development of cryptography through times. Moreover, as the vehicular language is English, students need to be aware where the country is located and how it is organised. Session 6 explains deeply the task: the creation of the mind-map poster as well as the presentation (with the language support). The PBL requires the student's voice and choice, then, they are the ones in charge of the format of the mind-map. The requirements are that the poster has the shape of the UK country that they are in charge of and the contents of the mind-map are a summary of all the content covered in the six sessions. The idea is that this mind-map (**whose format is decided by the group of students**) is a recap of all the content and the language that has been integrated in these six sessions. The teachers will give advice on the formats but they are the ones using their voice and choice. The format tips are the following ones: **video tutorial, hand-made, explanatory video, theatre play**, among others.

## SESSION 2: More than seven centuries of codification of Julius Caesar

Objectives of the session: This session aims at approaching the term of cryptography, encoding and decoding messages with the Caesar method in military ancient times.

Content-obligatory language for the session:

- Academic language (Keywords: Encode, decode, plain text, key, lower case, and uppercase).
- Descriptive text (e.g. explanation by the teacher the notion of Cryptography and the Julius Caesar ciphering).
- Instructive text (e.g. text stating the process and the steps needed to encode and decode a message following Julius Caesar method of cipher).
- Grammar items determined by the tasks and topic: (Imperatives needed to write the instructive text).

- Governments are being interested, even today, in having their information known only to authorized people.
- In short, science for message **encryption** is to put messages in code so they cannot be understood by people who do not want them to get the message.
- The idea is to put the messages in **code** so that they cannot be understood by people that we do not want to be understood:

**Process:**

Alice (subject A) wants to send a message to Bob (subject B) without Eve (enemy) knowing the content of the message.

Alice encrypts or **encodes** the message with a password that only she and Bob know.

Even if Eve intercepts the message as she doesn't know the password, she can't understand it.

When Bob receives the message, he will **decode** it and know what information Alice transmits to him.

**GLOSSARY:**

- We call **plain text** to an unencrypted text, written in **lowercase**, for example, "hello".
- An **encrypted text** is the one that is encoded or encrypted, written in **uppercase**, in our example \*3##O.
- The **key** is a short information necessary to encrypt and decrypt the algorithm.

**Activity 3 - Have you understood what cryptography is?:**

What is cryptography? Match the corresponding definitions with an arrow:

1 Plain text	a Science that hides the messages
2 Key	b action of transforming a message so that you do not understand
3 Success of the armies	c find out the key used for know the original message
4 Cryptography	d unprocessed text
5 Encode	e transformed text
6 Cryptanalysis	f action of transforming a message so that you can understand
7 Encrypted text	g depended on secure communications
8 Decode	h the rule used to encode and decode

	<p>These are the definitions learned in the previous explanation. They are specific vocabulary of cryptography (e.g. encode, decode, plain text, key, etc.)</p> <p>The assessment used in this activity will be peer-assessment. The tool employed is “Compare and contrast”. This consists of the sharing experience of exchanging the document above with one colleague and the peers are the ones contrasting with the solutions. Teachers ask a student for the correct answer to question 1, then ask the whole group if they agree, after a few seconds of short discussion the teachers say the solution out loud and their peers contrast the right or wrong answers. Then, question 2, 3...Teachers observe if in any definition the error rate is too high to reinforce learning, if necessary, with new examples. The grouping by pairs will be done according to geographic proximity criteria, each with the partner next to them.</p> <p>Activity solution: 1-d; 2-h; 3-g; 4-a; 5-b; 6-c; 7-e; 8-f</p>					
2.3	<p><b><u>Activity 4 - Encode messages with Caesar Cipher:</u></b></p> <p><b>4.1 How is it made?</b></p> <p>Teachers show students how Julius Caesar would code with the example "<b>I love speak English</b>" with <math>k = 1</math>:</p>	15'	R, S, L, W, I	T-S S-S	Ppt	PA

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

- In the message we change the letters "A" for the letters "B", the "B" for "C", the "C" for "D", etc. And the "Z"? Well, the "Z" for the "A".
- Then we have an encrypted message in which the key would be "1" ( $k = 1$ ), where "k" is the number of letters that move in the alphabet.
- So, "I love speak English" with  $k = 1$  will be: "J MPWF TQFBL FOHMJTI"

Then, all together in the blackboard we codified "If you can dream it, you can do it" with  $k = 1$  also. The encrypted text will be : "JG ZPV DBO ESFBN JU ZPV DBO EP JU".

Plain text	a	b	c	d	e	f	g	h	i	j	k	l	m	n	o	p	q	r	s	t	u	v	w	x	y	z
$k = 1$	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z	A

#### 4.2 Do you dare to try it on your own?

Translate and encode the following messages using the indicated displacements. The students must translate and codify:

- "Start the day with a smile" ( $k=1$ ),
- "Nobody finds its ways without getting lost several times" ( $k=2$ ),

	<ul style="list-style-type: none"> <li>• “All you need is love” (k=3).</li> </ul> <p>First, students try to translate individually, then, into groups of four try to compare and reach an agreement. Then, they encode the sentence individually and finally compare it with their partners of the group.</p> <p>Students are formed the grouping with the “Card deck strategy”. We will have prepared a deck with 24 cards because they are 24 students. The teachers will distribute a card faced down that all the students will have to discover at the same time and then get together without talking to their classmates following the same pattern (maybe they get together by objects, by numbers, by colours ...).</p> <p>The tool used to assess is “Compare and contrast”. This technique is explained above. In this case, it consist to exchange the documents with those of the closest group. Teachers project the correct answers. Each group verify that their partner group has answered correctly.</p>					
2.4	<p><b>Activity 5 - Instructive text</b></p> <p>In this activity, students need to produce a brief written piece of text individually stating the steps they need to follow to encode and decode by using the Julius Caesar method. This way, they</p>	15'	R, L, S, WI	Ind		TA

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

need to write a text by using imperatives and practice this part of the English grammar. They will have a guiding document (being this card) as an example:

Which are the steps to encode and decode a message according to Julius Caesar?

- 1. YOU NEED TO FIND THE DECODED MESSAGE. SEARCH IT!**
- 2. LOWER CASE OR UPPER CASE? CHOOSE THE FORMAT!**
- 3. WHAT IS IT FIRST, THE ENCODED TEXT OR PLAIN TEXT? DECIDE IT!**

GEP 2 

--	--	--	--	--

After creating the instructive text, each student needs to read the text out loud and the teachers will be assessing both, the reading task as well as the oral reading of it. Therefore, students are also practising their oral production (speaking).

The assessment tool used to assess the instructive text as well as its reading orally is the following checklist:

CHECKLIST ASSESSMENT TOOL		
Does the instructive text include the requirements from the guiding document (guiding card above)?		
Does the student include extra information that is not present in the card but is necessary to encode and decode using the Julius Caesar cipher method?		
Does the student use imperatives as it is necessary to include in the guiding document and in the instructive text?		
Does the student show that he or she has understood this method of cipher?		
Does the student show awareness in the English language?		
Does the student pronounce the main words related to cryptography properly?		

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

Does the student show important grammar mistakes in their writing?							
Does the student show confidence to speak in public?							
Does the student have eye contact and correct body gestures?							

### SESSION 3: Al-Kindi and Arab cryptographers manage to break the Caesar Cipher.

**Objectives of the session:** This session aims at addressing the idea that the best cryptographic methods can be broken. That is what Cryptanalysts do. In this case we will see that with the **frequency analysis** that is a mathematical tool of the branch of statistics, Al-Kindi and the Arab cryptanalysts managed to break the Caesar's Cipher.

Content-obligatory language for the session:

- Academic language: Encode, decode, analysis of frequency, plain text, key, frequency of letter in the alphabet, and bar chart.

	<ul style="list-style-type: none"> <li>- Text genre and typology: descriptive text (it is basically a mathematical session. So, it is very important that they understand the notions in order to do the mathematical operations. That is, the main idea is that they are exposed to descriptive texts.)</li> <li>- Interactive strategies (e.g. body language for the date of birth queue formation).</li> </ul>
Activities	<div style="display: flex; justify-content: space-around; align-items: center;">     </div>

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

3.1

**Activity 6 - Arabian cryptanalyst**

**6.1. Explanation:** Teachers explain to the students through a projected PowerPoint presentation that after ten centuries, the Arabian discover how to crack the code in Caesar Cipher. Students read the slides out loud and teachers make some comments and explanations on it.

- Al-Kindi analysed the letters of a message and discovered that some letters are used more than others. The letters “a” and “l” are the most frequent in Arabic while letters like “j” appear infrequently. This observation would be the first major advance towards cryptanalysis.
- If we know the frequency with which the letters appear in a language it is much easier to know the key. In English (also in Catalan and Spanish) the vowels appear more than the consonants. Linguists have studied how often letters appear in languages.

**UAB**  
Universitat Autònoma  
de Barcelona  
Facultat de Ciències de l'Educació

- For example, the **frequency** table in **Bar Chart** format for English is:

- The letter most used in English is the **e** that appears almost 13% of times in a text.
- The **frequency** table in **Bar Chart** format for Spanish is:

- Compare the frequency of the letter **“a”** in English (8%) and in Spanish (more than 12%).

3.2 **6.2 Mathematical website: Thatquiz used for the bar chart**

This is the time for students to learn how to make and interpret bar charts. Before they make one, we will warm up with the "Thatquiz" program:

Open a text document with the title "Activity 4.2. - name and surname". Share it with the teachers.

Type <https://www.thatquiz.org/> on the bar

a) In "Concepts" select "Graphs"

In "Length" select 10

In "Level" select 1

In "Feedback" select "On"

3.3. **6.3 – Create a bar chart**

Then, in groups of four following the grouping strategy of “Date of Birth queue formation”, they create a bar chart with the frequency of letters in Catalan. Here are the frequencies in percentages:

Lletra	A	B	C	Ç	D	E	F	G	H	I	J	K	L	M
%	12,55	1,32	3,60	1,06	3,94	13,89	1,00	1,28	0,72	6,99	0,30	0,00	7,74	3,16

Lletra	N	O	P	Q	R	S	T	U	V	W	X	Y	Z
%	6,40	6,58	2,39	1,2	5,99	7,43	5,44	4,84	1,25	0,01	0,45	0,35	0,05

Then, teachers show the solution, the group check if the answer is correct or wrong.

The activity **solution** is:

15'

- We choose a keyword, for example: "**GAME**".
- The letters in the first row correspond to the unencrypted text.
- The first column corresponds to the letters of the keyword.
- We will mark the letters of the center for a message with the key "game".
- Let's code the phrase: "**See you at five**"
- The first letter of the message is encrypted with the code of the row where the first box is "g", the letter "s" in code "g" is the letter "y".
- The second letter with the code of the row where the first box is "a", and so on. When the row is over it starts again.

Plain text:	s	e	e		y	o	u		a	t			f	i	v	e
Key: GAME	G	A	M		E	G	A		M	E			G	A	M	E
Coded text:	Y	E	Q		C	U	U		N	X			L	I	H	I

- Nobody will know that YEQ CUU NX LIHI is a proposal to see each other at five.
- Observe the letter "e" in Plain text. Now, observe in Coded text the "e" is "E", "Q" and "I".
  - **Now, The "Frequency Analysis" is no longer useful for decoding the message!!**

	<ul style="list-style-type: none"> <li>We can see another example in the video:  <a href="https://www.youtube.com/watch?v=SkJcmCaHqS0">https://www.youtube.com/watch?v=SkJcmCaHqS0</a> </li> </ul>					
4.2	<p><b>7.2 - Encode a message with Vigenère cypher.</b></p> <ul style="list-style-type: none"> <li>In groups of six.</li> <li>Search for a keyword.</li> <li>Think and write a message.</li> <li>Encode each one separately with the Vigenère Code.</li> <li>Compare if you have stayed the same.</li> <li>The grouping method used for this activity is “Card grouping” technique. The cards will reflect some ciphering methods. Students use body language to group:</li> </ul> 	10 min	R, S, L, W	SG S-S		SA

### 7.3 – Voicethread about Vigenère cypher.

Students will need to share, in a podcast created by them, the details of how they coded the messages using the Vigenère cypher. This will be done with Voicethread that they will need to listen to. The content of the Voicethread will be their own interpretation of the Vigenère cypher. This is a guiding document for them to follow. It should include the following information. It is also a checklist for them to assess their own colleagues, as it is a peer-assessment tool.

CHECKLIST ASSESSMENT TOOL	😊	😞
Do you need a table in the Vigenère cypher with columns and rows?		
Do you need a keyword? Did you need to explain further?		
Do you need a plain text? Did you explain more?		
Do you use the keyword to modify the plain text?		
Did you encode a message with this cypher method?		
Did you find problems while pronouncing some words?		
Did you need further help from your colleagues in the group to construct sentences?		
Did you check any pronunciation before recording the Voicethread		

15'

R, S,  
L,  
W, I

Voicethread

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

podcast?		
Do you have any positive comment about your colleagues performance? If so, which?		
Do you notice the pronunciation of a particular word wrongly? How can you improve it? Help your colleagues!		
Did they hesitate while producing their speech? Did they prepare properly?		

The grouping method used for this activity is “Card grouping” technique. The cards will reflect some ciphering methods. Students use body language to group:

- 
- That allows to know how many letters is the key.
- It will be the **greatest common divisor** of the space between repetitions.
- And, by frequency analysis, find each of the codes.

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

- In short, looking for repetitions in the encrypted text has allowed us to identify the length of the key, which turned out to be four letters. This allowed us to divide the encrypted text into four parts, each encoded according to a monoalphabetic substitution defined by a letter of the code.
- You should know that:
  - Babagge's great contribution was to decipher the indecipherable Vigenère Cypher. That was the biggest cryptanalytic leap since the ninth-century Arabs deciphered the Caesar cypher inventing the frequency analysis.
  - But more than 100 years passed until it was learned that Babbage had deciphered the Vigenère cypher. **Why?:**
    - Some say that Babagge forgot to publish his feat.
    - Others believe he wanted to publish it, but the British government asked him not to tell anyone because that way they would have an advantage in other wars that could come to win in the successive wars that were going on.
    - The latter is what has happened throughout history: **the achievements of the cryptanalysts have been kept secret for the benefit of national security.** If the enemy does not know that he can decrypt his messages, he will continue using the same coding and will have access to all the information he wants.

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

	<p><b>8.2 – Greatest Common divisor</b></p> <p>This activity consists of practicing the calculus and application of mathematical concepts known as Greatest Divisor Common.</p> <p>Students need to observe the repetition of words to decide if they need to apply the GCD to know the extension of the key word. Then, they need to answer some questions related to the mathematical field.</p> <ul style="list-style-type: none"> <li>• Do you know about Romeo and Juliet? It is a tragic love story. We will talk about them later.</li> <li>• Now, you have found a long love letter that Juliet wrote to Romeo.</li> <li>• The letter is coded and no one has been able to decipher.</li> <li>• You observe it carefully and verify that <b>there are two repetitions of words</b>.</li> <li>• One of the repetitions is given 30 letters away and the other 48 letters away.</li> <li>• You must answer:             <ol style="list-style-type: none"> <li>a. How many letters is the key composed of?</li> <li>b. Knowing that Juliet wrote it, what do you think could be the key?</li> <li>c. And if you discover that there is a repetition every 40, 56 and 72 letters</li> <li>d. How many letters is the key composed of?</li> </ol> </li> </ul>	15'	R, W	Ind		PA

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

e. Knowing that Romeo and Juliet is a work of William Shakespeare, what do you think could be the key?

**Solution activity 8.2. - Greatest Common divisor**

One of the repetitions is given **30 letters** away and the other **48 letters** away.

a) How many letters is the key composed of?

		48	2
30	2	24	2
15	3	12	2
5	5	6	2
1		3	3
		1	

$$30 = 2 \cdot 3 \cdot 5$$

$$48 = 2^4 \cdot 3$$

$$M.C.D. (30, 48) = 2 \cdot 3 = 6$$

b) Knowing that Juliet wrote it, what do you think could be the key?

Any word in English with six letters, perhaps JULIET

c) And if you discover that there is a repetition every 40, 56 and 72 letters.

40	2	56	2	72	2
20	2	28	2	36	2
10	2	14	2	18	2
5	5	7	7	9	3
1		1		3	3
				1	

$$40 = 2^3 \cdot 5$$

$$56 = 2^3 \cdot 7$$

$$72 = 2^3 \cdot 3^2$$

$$M.C.D. (40, 56, 72) = 2^3$$

d) How many letters is the key composed of? **8 LETTERS**

e) Knowing that Romeo and Juliet is a work of William Shakespeare, what do you think could be the key?

Any word in English with EIGHT letters,

perhaps Shakespeare – Shakespr (8 letters)

Teachers will project the solutions for the activity and, through peer-assessment with the tool "Contrast and compare", previously explained above, they will need to check if they did a good job.

The grouping method used for this activity is “Card grouping” technique. The cards will reflect specific vocabulary of this project.

	<h2>SESSION 5: Steganography and Invisible Ink</h2> <p>Objectives of the session: The main aim of this session is to discover what steganography is and experiment it with an invisible ink workshop.</p>						
	<p>Content-obligatory language for the session:</p> <ul style="list-style-type: none"> <li>- Academic language: specific vocabulary (e.g. cotton bud, vinegar, sodium, milk, heat, language support included) and discursive connectors (e.g. <b>first</b>, you heat it with baking soda, <b>then</b>, you change the element).</li> <li>- Genres and text typologies: Explanatory text (e.g. explanation of the experiment) and instructive text (e.g. step to follow to carry out the experiment by combining milk, vinegar, etc).</li> <li>- Grammar items determined by the task: 3rd person singular (e.g. when you take the vinegar to the heat, <b>it burns out</b> and the <b>ink is visible</b>).</li> <li>- Task management language items (e.g. first, you use the vinegar. In this case, this goes here because...)</li> <li>- Interactive strategies (e.g. body language, language support, role of gestures when taking turns when discussing in public, courtesy, etc).</li> </ul>						
<p>Activities</p>							

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

<p>1. Steganography and Invisible Ink Workshop: Explanation.</p> <p>In this activity, the students need to make invisible ink with their own group. Before that, students need to be grouped in the way that is explained below. They need to try with different components being vinegar, baking soda, lemon, etc., and teachers are guiding the whole activity by giving them language support and discussing strategies (scaffolding) to make their own discussion of the experiment at the end of the session very profitable.</p> <p>Students are grouped forming four groups of six. As a grouping technique, they take a card of the following ones:</p>	<p>10'</p>	<p>L</p>	<p>T-S WG</p>	<p>Ppt</p>

The experiment will be carried out the following way:

Template adapted from CLIL-SI 2015.  
 More information at: <http://grupsderecerca.uab.cat/cliisi/>

**Cryptography**  
**4.1. Steganography – Invisible ink**

**Materials: what you'll need**

- Half a lemon
- Water
- Spoon
- Cotton bud
- White paper
- Lamp or a heater

**Cryptography**  
**4.1. Steganography – Invisible ink**

**Procedure: what do you have to do?**

Squeeze some lemon juice into the bowl and add a few drops of water

Mix the water and lemon juice with the spoon

Dip the cotton bud into the mixture and write a message onto the white paper

Wait for the juice to dry so it becomes completely invisible

When you are ready to read your secret message or show it to someone else, heat the paper by holding it close to a light or a heater.

**Cryptography**  
**4.1. Steganography – Invisible ink**

**2. Make invisible ink using milk**

Milk is an effective and readily available form of invisible ink. Milk can be used to reveal secret messages.

**Materials: what you'll need**

- Milk
- Cotton bud
- White paper
- Lamp or a heater

**Cryptography**  
**4.1. Steganography – Invisible ink**

**Procedure: what do you have to do?**

Put some milk into a bowl

Dip the cotton bud into the milk and write a message onto the white paper

Let it dry and watch how it disappears.

Heat the paper by holding it close to a light or a heater

## Cryptography

### 4.1. Steganography – Invisible ink

#### 3. Make invisible ink with vinegar

Vinegar is a proper form of invisible ink.

##### Materials: what you'll need

- Two tablespoons of vinegar
- Water
- Cotton bud
- White paper
- Lamp or a heater

## Cryptography

### 4.1. Steganography – Invisible ink

#### Procedure: what do you have to do?

Mix the vinegar with a few drops of water in a bowl

Dip the cotton bud into the mixture and write a message onto the white paper

Wait for it to dry and watch how it disappears.

Bring the paper close to a heated bulb or a heater and see your words appear gradually on the white paper.

## Cryptography

### 4.1. Steganography – Invisible ink

#### 4. Secret messages with sodium bicarbonate

Sodium bicarbonate can react chemically with some substances like lemon juice to reveal a secret message.

##### Materials: what you'll need

- Sodium bicarbonate or baking soda
- White paper
- Cotton bud
- Lemon juice
- Water
- Teaspoons

## Cryptography

### 4.1. Steganography – Invisible ink

#### Procedure: what do you have to do?

- Combine approximately 1 teaspoons of sodium bicarbonate with 3 teaspoons of water.
- Dip the cotton bud into the mixture and write a message onto the white paper
- Write a message onto the white paper
- Let it dry and brush any excess sodium bicarbonate off the paper
- To reveal the secret message, spray lemon juice on the message.

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

<p>All the students will do the activities below. However, they will do it in groups so that they have their own perception of the experiment. They need to maintain a conversation in English. Therefore, they have the language support below so that they have a scaffolding. After doing the experiment with all the groups, they will need to discuss what happened in the session by sharing their own opinions on it. The following language support helps them with it.</p> <p>As for the discussion task, these are the materials given to students to discuss together and share their own opinions about the experiment. It needs to be mentioned that all materials used in this project are original from the authors of it.</p>					
---	--	--	--	--	--

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

## Learn how to express your ideas!

- 1. I reckon it is...
- I really loved the workshop 😊
- 2. I couldn't agree more with you/ I couldn't disagree more with you.
- 3. What happened with the "vinegar"?
- 4. What does "cotton bud" mean?
- 5. I don't know how you see the ink.
- 6. I don't see much difference.
- 7. Are you joking? It's absolutely different.

GEP 2

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

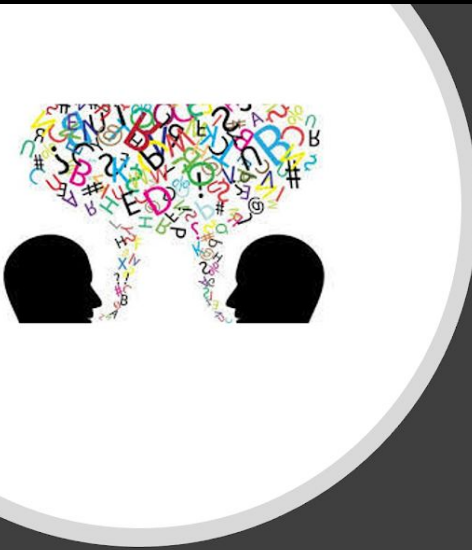

## How can you express yourself in English?

- 1. Let's think on the invisible ink made with milk. What happened?
- 2. Can you help me with this?
- 3. I don't really get it. How did you do it?
- 4. For me, it was a lovely workshop.
- 5. I prefer the theory of cryptography.

GEP 2

Template adapted from CLIL-SI 2015.  
 More information at: <http://grupsderecerca.uab.cat/cliisi/>

Use this vocabulary to help you!

- I think this answer is correct because...
- I don't think so.
- I don't agree with you.
- I need to think about it more.
- I don't know what happened but I enjoyed the workshop.

Eventually, the following document is used to assess the students. The assessment tool is a checklist.

Template adapted from CLIL-SI 2015.  
 More information at: <http://grupsderecerca.uab.cat/cliisi/>

	Yes	No
Did they take care of the materials employed?		
Were they careful with the heat?		
Could they wait until the ink was visible?		
Could they interact in English following our instructions?		
Could they internalise the main point of the practical session?		
Could they follow the instructions to do the mixtures?		
Do they need further guidance in terms of English?		

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

5.5	<u><a href="#">Activity 13. Think, discuss and share. How it works.</a></u>	18'	S,L, I	SG		TA
	The activity consists of making invisible ink by writing messages that will be able to be read once they approach, to the heat the different components mentioned above. The activity will be made in group but every group will try all the components: milk, vinegar, baking soda, and lemon.					
	Finally, they will discuss each group of six members to find out why this happens. After the discussion, we will share it with the rest of the class. The following language support is given to the students in order to understand the experiment. The language support is given in a way of a					

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

matching activity so that they are familiarised with it already. Once they are aware of the words, they can start the experiment with the different materials: milk, vinegar, baking soda, etc.

## Cryptography - Invisible Ink Activity

### 4.1. Steganography

**Match the words with an arrow**

<ul style="list-style-type: none"> <li>Cotton bud</li> <li>Hidden</li> <li>Spoon</li> <li>Squeeze</li> <li>Drops</li> <li>To dip</li> <li>Heater</li> <li>Heated bulb</li> <li>Brush</li> </ul>	<ul style="list-style-type: none"> <li>Amagat</li> <li>Bastonet de cotó</li> <li>bombeta calenta</li> <li>Cullera</li> <li>Escalfador</li> <li>Esprémer</li> <li>Gotes</li> <li>Raspall o pinzell</li> <li>Sucar</li> </ul>	
---	---	--

Teachers will guide the students to see that the oxidation of the carbon molecules from the diluted lemon juice (or other substances) that are absorbed by the paper are not noticeable

<p>until the paper is exposed to heat, which causes some of the chemical bonds to break down, freeing the carbon.</p> <p>At the end of the experiments, the students will need to discuss what they think about the session and how they think the invisible ink is seen after being heated. The results of the experiment will be shared having the help of the language support below. The discussion language support given has already been shown above. Eventually, the assessment checklist has already been covered as well.</p>					
---	--	--	--	--	--

## SESSION 6: Presentation Poster Conference (Assessment)

Objectives of the session: The objective of the session is recapping all the important information about cryptography and create a poster of them. They will be shown as a poster conference. The audience is, firstly, the rest of the class and then, the rest of students of the high school. As we are dealing with a PBL, and one of the main functions of it is to be public and open to everybody, the posters will be hung on the walls so that the rest of the groups can be active in it.

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

	<p>Content-obligatory language for the session:</p> <ul style="list-style-type: none"> <li>- Explanatory text and audio (e.g. Genially interactive image), complementary texts.</li> <li>- Task management strategies (e.g. grouping through cards)</li> <li>- Interactive strategies (e.g. oral presentation- support).</li> </ul>					
	<p>Activities.</p>					
<p>6.1</p>	<p><b>Activity 14. Reading Task:</b> UK geography. The activity will consist of reading individually a text regarding UK geography. As the UK has been a crucial point in the path of cryptography, it is important that students locate where it is and what parts the country has. That is why it is combined in this project. The text is extracted from the BBC and you can find the link in the reference section. However, it has been adapted using the ICT tool “Genially” by creating two interactive images. The image is the same one in both cases. However, the information that it includes is not the same. They have complementary information which both students will need to do the mind-map. The interactive images also contain the clips of the pronunciation of certain words that are difficult to produce.</p>	<p>5'</p>	<p>R, S, L</p>	<p>T-S S-S WG</p>	<p>Ge niall y</p>	<p>TA</p>

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

The reading task runs as follows:

- **In the pre-reading task:** Each student is given one card. They are shown below:

Each card corresponds to an interactive image created by Genially in which the information of the reading appears. However, the information of student A and student B are complementary, because it is a complementary text, and, therefore, complementary images.

Template adapted from CLIL-SI 2015.

More information at: <http://grupsderecerca.uab.cat/cliisi/>

	<p>The information they have initially (without being shared with their partner) is necessary to respond to the survey monkey activity following this one.</p> <p>In the interactive image (in A or in B, there is information about the UK countries and also some reference and voice clips to the pronunciation of certain difficult words).</p> <ul style="list-style-type: none"> <li>- <b>In the while-reading task:</b> Students need to read and listen to the information in the interactive image, each one, their corresponding image.             <ul style="list-style-type: none"> <li>- <b>Interactive image Student A:</b></li> </ul> </li> </ul>

6.5	<p><b>Activity 17. Posters' conference.</b> It consists of the main part of the PBL. As it is the final product of this project and the posters' conference is open to everybody in the high school. Therefore, it consists of two important parts. Firstly, there is one presentation made in class in front of their peers. There is another part in which the posters are hung on the walls as the final product of the 6 sessions.</p> <p>As a matter of fact, activities 15 and 16 are correlated as they are the poster creation and the succeeding poster presentation. Students are offered with a language support card to prepare for the presentation in front of the class. This card has been prepared by the teachers carrying out this project by using the platform called "Canva" and it is an infographic.</p>	30'	S, L, I	S-S		TA

**PLAN YOUR PRESENTATION**  
GEP 2  
MIND-MAP POSTER CONFERENCE

**INTRODUCE YOURSELF**

**Who are you?**

- Good morning/afternoon. We are \_\_\_\_\_ and we are here to present our mind-map poster.
- As you all might know, we are \_\_\_\_\_ and our mind-map poster is about \_\_\_\_\_.

**LET'S MOVE ON!**

**Change speakers.**

- As \_\_\_\_\_ (Peter) will explain deeply later, this is a ...
- Moving on to \_\_\_\_\_ (Peter), ...
- Regarding cryptography, \_\_\_\_\_ (Peter) will tell you more about it.

**CHANGING TOPICS**

**Different parts of the speech**

- Dealing with...
- In terms of...
- Having mentioned this, we will continue commenting on...

**LET'S CLOSE!**

**Importance of a good closing.**

- Eventually, we would like to thank you for listening to us.
- Also, it is relevant to listen to your feedback. Do you have any comments or questions?
- Thanks so much for your attention.

MIND - MAP POSTER CONFERENCE GEP 2
